Apply filters to SQL queries

Project description

In this project I will be using filters NOT, AND, OR. While using these filters I will provide different ways to accomplish tasks as a security analyst.

Retrieve after hours failed login attempts

In this exercise as a security analyst I was tasked with looking into a potential incident happening after hours. The incident happened after 18:00. I need to query the *log_in_attempts* table and review after hours login activity. Also looked for failed login attempts in the success column by inputting 0 or False to indicate a failed attempt.

Retrieve login attempts on specific dates

	ganization]					
	log_in_atte login date	e = '2022-05-0	8' or login	date = '202	22-05-09':

In this exercise as a cyber security analyst I was tasked with finding a suspicious event occurring on two specified dates. To investigate the event, I need to review all login attempts which occurred on the specified date and the day before.

Retrieve login attempts outside of Mexico

In this exercise as a cyber security analyst. One more update to employee machines is needed. Employees in the Information Technology department already have this update, but employees in all other departments need it. So as a cyber security analyst I am tasked with filtering out the Information Technology department to see all other departments who need the update.
